

MARKAUDIO SOTA

HEAR OUR DIFFERENCE
Combines Italian flare with British and Asian engineering.

TOZZI ONE

TOZZI ONE

Markaudio-Sota loudspeakers aren't conventional.
The music is natural, detailed and voices sound real.
You can truly Hear Our Difference.

Tozzi One is a high-end single driver loudspeaker. It incorporates cutting-edge full-range driver engineering with a sub-compact enclosure designed with the latest in industrial design techniques. Its range and bass performance are remarkable for this class of purist miniature loudspeaker.

> Key features include:

- Advanced 50mm Sota 5 all-range driver
- Rigid composite enclosure constructed from 3 sub-structures.
- Three colour schemes
- Waveguide front baffle
- Base includes mounting for ¼" thread tripods or similar stands

> Styling

Tozzi One was developed by Mark Fenlon, the British engineer responsible for the internationally acclaimed Alpair loudspeaker drive units. Mark's concept was to develop a sub-compact loudspeaker to partner our flagship Viotti One standmount, using advanced composite materials that suit modern decor and living requirements. The size and styling echoes compact high-quality cameras, and Tozzi One can be mounted on any standard camera or photo-light tripod, making it a great lifestyle icon in modern living spaces. It can also be used on desktops, shelves or wall brackets. Three choices of finish are available, giving a fresh, modern appearance to this unique product:

- **Charcoal (black front and back panels with grey leatherette centre)**
- **Ruby (red front and back panels with grey leatherette centre)**
- **Pearl (white front and back panels with grey leatherette centre)**

> The Drive Units

Tozzi One uses a single custom high-performance all-range drive unit, the Sota 5. Also designed by Mark Fenlon, in Tozzi One it produces exceptional range for a sub-compact speaker. Output stretches from upper bass notes to beyond the upper limit of human hearing. The advanced alloy cone has a very shallow profile. With the signature Tozzi waveguide, this gives excellent dispersion of sound energy into the room. Long-stroke suspension avoids excess compression. Sound is clean, precise and phase-accurate. No filter is used; the output of the amplifier goes direct to the driver.

> Cabinet Engineering

Tozzi One is constructed from three rigid sub-structures. They are made from a composite of Acrylonitrile-Butadiene-Styrene with reinforcing fibres. These can be produced to exceptional tolerances, have a long service life and are cosmetically attractive. The front and central sub-structures are precision aligned and bonded to create a stable primary assembly. The rear panel is then mechanically secured, completing the structure.

Specifications

- 1 x Sota 5 all-range driver
- 90Hz - 25KHz anechoic
- 84dB 1w @ 1m
- Dimensions: 200 x 126 x 200 mm

- 15w Nominal (30w peak).
High quality amplification is highly recommended.
Please see our technical page for more in-depth advice
- Weight (each): 1.42 Kg
